

BAE Systems and Leonardo awarded contract to develop next generation radar for RAF Typhoon

2020 - 09 - 03 - www.airrecognition.com

BAE Systems and Leonardo have been awarded a £317m contract to develop the Active Electronically Scanned Array (AESA), the European Common Radar System Mark 2 (ECRS Mk2) radar, to a standard ready to be integrated on to RAF Typhoons.

It will sustain more than 600 highly skilled jobs across the country, including more than 300 at Leonardo's site in Edinburgh, over 100 electronic warfare specialists at the company's site in Luton, and 120 engineers at BAE Systems' site in Lancashire. The ECRS2 is a multi-functional array (MFA) that will give UK Typhoons a world-leading Electronic Warfare capability, in addition to

traditional radar functions, including wide band Electronic Attack. It will equip RAF pilots with the ability to locate, identify and suppress enemy air defences using high-powered jamming.

They can engage targets whilst beyond the reach of threats - even when they're looking in another direction - and operate inside the range of opposing air defences, remaining fully protected throughout.

This game-changing capability will replace the mechanically-scanning radar that RAF Typhoons are currently equipped with and will ensure the UK retains the freedom to deliver air power...

Rolls-Royce Launches Virtual Reality Maintenance Training Software for USAF C-130J Engines

2020 - 09 - 15 -

www.asdnews.com

Rolls-Royce has launched its new Virtual Reality Maintenance Training Software for its AE 2100 engines powering C-130J aircraft, with the first training system to enter service with the U.S. Air Force at Kirtland Air Force Base in New Mexico, US. The 58th Maintenance Group (MXG) is part of the 58th Special Operations Wing at Kirtland. The wing flies HC-130J and MC-130J aircraft, and operates within the Air Force Air Education and Training Command.

The new Virtual Reality (VR) system will allow engine maintainers to learn and practice their skills in an immersive visual environment, increasing efficiency and reducing cost. The software enables students and instructors to practice on a virtual AE 2100 engine, replicated in form and function. This creates an environment for students to 'learn by doing,' increasing their recall by completing multiple repetitions. Kinesthetic active learning...

USA : New policy addresses 3D parts for Army aircraft

2020 - 09 - 08 -

www.amcom.army.mil

As the Army explores the potential of some advanced manufacturing methods and 3D-printed parts to maintain and sustain its aviation fleet, recently published guidance aims to strike a balance between safety, improvements to readiness and escalating costs. Advanced manufacturing refers to new ways of making existing products and the production of new products using advances in technology.

Advanced manufacturing includes additive manufacturing, a process of joining materials to make parts from 3D-model data. Additive manufacturing differs from the traditional subtractive process that cuts away material to shape and produce parts. The U.S. Army Aviation and Missile Command recently published a policy memorandum addressing advanced manufacturing for Army aircraft parts, components and support products. "Evolving technologies create a unique...

Le Rafale Marine passe au standard F3
2012 - 04 - 26 - info-aviation.com

Les dix premiers Rafale produits au début des années 2000 étaient au standard appelé F1. Ils étaient dotés uniquement de capacité air-air et de ravitaillement en vol.

L'opération de retrofit de ces avions consiste à les modifier en profondeur pour leur donner les mêmes capacités que les avions de standard F3, actuellement produits.

« Le gain opérationnel apporté par le F3 se traduit par un panel de nouvelles missions réalisables par ces avions : attaque air-sol et reconnaissance, mais aussi possibilité d'assurer la mission de dissuasion nucléaire », explique Christophe Carpentier, responsable technique de l'opération « Retrofit F1.F3 » à la Direction générale de l'armement (DGA). Selon lui, un des challenges du projet est la maîtrise des événements clés, comme l'entrée d'un avion en retrofit ou la sortie d'un fuselage du Service Industriel de l'aéronautique (SIA6).

Cette modernisation consiste aussi à coordonner les travaux des différents intervenants tels que Dassault, MBDA, Thales, Saegem, et d'organismes d'Etat. Enfin, la maîtrise calendaire est primordiale quand on sait que le montage final des avions rétrofités s'intercalera dans la chaîne de production. Chaque phase doit donc...

ACTUALITES

South Korea : BAE Challenges Lockheed Martin for F-16 Upgrade Work
2012 - 04 - 27 - www.ainonline.com

BAE Systems is competing against Lockheed Martin to be the prime contractor for Korea's forthcoming upgrade of some 130 F-16s. Attention has focused largely on the competition between Northrop Grumman and Raytheon to supply the AESA radar. But the Korean request for proposals also invited non-OEMs to bid as system integrator.

Taiwan and the U.S. are also planning a similar upgrade to some 140 and 300 aircraft, respectively. Other F-16 operators may follow, making this a multibillion-dollar market. BAE claims long experience in supplying avionics and electronics for the F-16. It has provided head-up displays, electronic warfare systems, reconnaissance sensors, flight control computers, terrain avoidance systems, IFF transponders, Link 16 communications and other items. The company designed and has installed a new commercial fire control computer (CFCC) in 270 U.S. Air National Guard F-16C's...
